

REKAPALLI TEJA

Node.js Backend Developer

Hyderabad, India • +91 7989219899 • rekapalliteja1@gmail.com • LinkedIn • GitHub • Portfolio

PROFESSIONAL SUMMARY

Backend Developer with 2+ years of professional experience designing, building, and deploying scalable web applications and microservices using Node.js and NestJS. Proficient in REST APIs, real-time communication with WebSockets, Redis caching, and asynchronous event-driven messaging with Apache Kafka. Strong hands-on experience in database management using MongoDB (Mongoose) and PostgreSQL (TypeORM), implementing Unit/Integration Testing with Jest, and containerizing applications with Docker.

TECHNICAL SKILLS

Languages & Frameworks:	JavaScript (ES6+), TypeScript, Node.js, NestJS, Express.js
Databases & ORMs:	MongoDB (Mongoose), PostgreSQL, TypeORM, Query Optimization, Redis Caching
Architecture & Messaging:	Microservices Architecture, Distributed Systems, Kafka, WebSockets, REST APIs
Auth & Security:	JWT, OAuth 2.0, Firebase Authentication, Role-Based Access Control (RBAC)
Testing & Quality:	Jest, Supertest, Unit Testing, Integration Testing, TDD
DevOps & Tools:	Docker, AWS S3, Jenkins (CI/CD Pipelines), Git, Axios, Postman

PROFESSIONAL EXPERIENCE

Backend Developer — United New Digital Media

Dec 2023 – Present | Hyderabad, India

- Architected, developed, and maintained production-ready microservices and RESTful APIs using Node.js and NestJS, serving high-traffic client applications.
- Containerized microservices using Docker and automated deployment workflows through Jenkins CI/CD pipelines to ensure high availability and continuous delivery.
- Optimized database performance by implementing MongoDB query indexing and Redis caching, reducing API response times by 35% and decreasing core database load.
- Designed event-driven messaging systems with Kafka for asynchronous task execution across distributed microservices.
- Integrated real-time bidirectional communication features using WebSockets to support live chat and interactive user sessions.
- Integrated third-party AI-powered recommendation engines while achieving 80%+ code coverage using Jest unit testing.
- Collaborated with cross-functional teams in an Agile/Scrum setting, consistently delivering sprint commitments on schedule.

PROJECTS

Pidikili — Community Social Impact Platform

Tech Stack: Node.js, MongoDB, Redis, REST APIs, RBAC

- Developed a community-driven platform connecting individuals seeking assistance with verified working professionals and volunteers for legal, medical, and emergency needs.
- Implemented invite-only onboarding workflows, community help request lifecycles, and in-app direct communication channels.
- Architected a 5-tier hierarchical Role-Based Access Control (RBAC) engine (Village, Mandal, District, State, Country) and a user contribution recognition system.

Rentastico — Rental Platform

Tech Stack: NestJS, MongoDB (Mongoose), WebSockets, Kafka, Redis, Docker

- Built a high-concurrency rental backend featuring real-time chat via WebSockets and video streaming workflows.
- Integrated AI-driven recommendation algorithms and implemented Redis session caching, reducing query latency by 30%.

LargePocket — Service-Based E-commerce Platform

Tech Stack: NestJS, MongoDB, TypeORM, Geospatial Query Optimization

- Developed localized service discovery APIs with 2dsphere geospatial indexing, enabling sub-second search across 10k+ active listings.
- Applied query optimization strategies and connection pooling to ensure high database throughput under heavy load.

TripHouse — Travel Social Media Platform

Tech Stack: Node.js, Express.js, MongoDB, AI APIs, Jest

- Designed itinerary management and social networking APIs integrated with third-party AI travel planning models.
- Achieved 85%+ test coverage using Jest and Supertest to ensure high stability across core trip-sharing endpoints.

Presume — Resume Builder Platform

Tech Stack: NestJS, AWS S3, Nodemailer, Docker

- Implemented asynchronous file processing and automated resume storage workflows using AWS S3 alongside transactional email delivery with Nodemailer.

Hospital Management System

Tech Stack: Node.js, MongoDB, Express.js

- Engineered slot-booking and appointment scheduling APIs featuring atomic database operations (ACID) to eliminate race conditions and double-booking issues.

EDUCATION

B.Tech in Mechanical Engineering

Bonam Venkata Chalamayya Institute of Technology and Science | JNTUK

2022
